LAYOUT / SECTION DIVIDER

Section divider

A new part of the story.

Replace this line with a short introduction to the section.

Image + copy

Use this area for a short, deliberate argument. Let the image carry the atmosphere.

The text occupies eight columns. The image uses sixteen. Both share the same margins and vertical rhythm.

Two-column copy

The first idea

Use a two-column frame when two pieces of writing need equal weight. This object style sets two columns with a generous centre gap and aligns text to the top.

Keep each paragraph connected to its role. Change the Base styles to change the family; use the Project styles to choose the size.

The second idea

This example uses a deliberate column break. Replace the two sections with characters, themes, episodes, or another useful comparison.

For shorter labels or notes, use the Caption object style. For image assets, choose Fill and crop or Fit whole image according to whether cropping is acceptable.

Colour system

ON DARK

Primary ink

Supporting text

Underlined link

Use these accents on this surface.

Each tile shows the ink to use on that accent fill.

ON LIGHT

Primary ink

Supporting text

Underlined link

Use these accents on this surface.

Each tile shows the ink to use on that accent fill.

Change the named RGB swatches once. Keep the paired light and dark versions together.

Useful automation, visible rules.

Units stay together.

Keep 24 fps, 35 mm, 120 px, 10 sec and 16:9 intact when a line wraps.

Apply Body - Units and ratios. The pattern only joins a short numeric value to a recognised unit; it does not make whole paragraphs unbreakable.

Bold. *Italic.* ***Bold italic.*** Underlined. [Visible link.](#)

Frame rate:

24 fps

PROJECT KEYWORDS

PROJECT_NAME and **CHARACTER_NAME** use the keyword character style.

Edit the two example words under Paragraph Style Options > GREP Style. Escape punctuation if it has a special meaning in GREP.

DRAFT TAGS

TBC, **TBD**, **TODO**, **TK** and **PLACEHOLDER** are easy to spot.

Use this preset while drafting. Switch back to Project Body before delivery when you no longer need review highlighting.

Pink. **Purple.** **Blue.** **Teal.** Mono.

NUMBERED

1. First point
2. Next point

Start here.

From Workbench

1. Copy the one-page v0.03 starter into the project folder. Keep your importer and workbench.md beside it.
2. Open the saved INDD and run your Workbench importer. It needs the original Head. / Sub. / Body. frame and one page.
3. After importing, compose the slides. Use Object Styles for frames and the Light Slides group when the background is light.

This ten-page kit is a reference, not the importer input. Its layouts demonstrate the same styles and grid.

Contents, made simple.

1. Apply TOC - Headline to each title you want listed. Use the light-slide variant on light backgrounds.
2. For an image-only slide, add a marker on TEXT. Apply TOC - Marker (hidden layer) and TOC marker - Nonprinting. Use one source per entry.
3. Add a blank page. Layout > Table of Contents. Choose the dark or Light preset. Place the list inside the full margins, then apply the Contents - Two columns object style.
4. After editing titles or reordering pages, click inside the contents and choose Layout > Update Table of Contents.

Make it yours.

Change the few things that matter.

FonTS: open Base - Edit. Change the font family and weight in Base - Head, Base - Sub and Base - Body. Base - Page Number controls the folios; Base - Screenplay is separate.

Colours: edit warm-black, warm-white and the four accent families in Swatches. Mono offers a neutral accent. Apply L-Light and Light Slides text styles for a light page.

If you change font families, also check the Bold, Italic and Bold Italic character styles. Different families name their weights and italics differently.

Larger or smaller?

Open Window > Utilities > Scripts > User > Deck Size Controls. Use Smaller or Larger for Head, Sub or Body. Apply changes the selected sizes in one Undo step.

For example, Body | 000 (32) to Body | +01 (40) changes 32/48 to 40/64. The helper also checks grouped text for overflow.

You can also double-click a Project style and change Based On to a preset in the matching Head, Sub or Body group. You choose font families and weights yourself in Base - Edit.

The starter folios use 01 through 99. This page is 10, not 010. Contents update after you change titles or page order; they are not live while you type.
